

# SUPER ANCHOR SAFETY FALL PROTECTION

Super Anchor manufactures the most widely recognized and specified fall protection anchors & equipment in the residential construction industry.

Falls from height are consistently the leading cause of death and injury on the jobsite and tradesmen are exposed everyday to this danger. We have found that the majority of the time there is no anchor for anyone to tie-off too, thus our mission is to provide the industry with the best anchors available.

Our most basic philosophy is this: If anchors are present on a jobsite, workers are more likely to tie off and be safe. Also, with anchors installed, Developers, General Contractors and Owners are in a better position to require and enforce fall protection practices.

We approach construction safety from the ANCHOR DOWN. With anchors in place and available, the opportunity presents itself to supply our lifelines, harnesses, shock absorbers, lanyards and all of the necessary equipment to be completely safe. Super Anchor manufactures and sells the highest quality safety components available in the market today. All of our components are tested and meet all applicable OSHA, ANSI and CSA standards.

Super Anchor goes beyond the manufacturing and distribution of products, though. We work with Builders, Developers, Architects, Engineers, Legal and OSHA to make absolute sure that we address all of your questions and concerns with installing roof anchors.

Throughout our 20+ years of experience, we have the experience necessary to help you. Please contact us so that we can help in any way possible.
